Abstracts

Posterior chamber intraocular lens, also known as implantable contact lens (ICL), provides a new way for the treatment of refractive errors other than corneal surgery, and can be applied to patients with high myopia, anisometropia, and keratoconus. On the basis of spherical intraocular lenses, aspheric intraocular lenses force light rays that cannot be focused on one point by spherical lenses to focus on the same point through small changes in surface shape. Aspheric surfaces can be used to compensate for visual problems caused by spherical aberration of the eye.

The global Aspheric Posterior Chamber Intraocular Lens market size was estimated at USD 1520.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
