Abstracts

Asset optimization and disposal services involve the evaluation, consolidation, restructuring, and disposal of inefficient, idle, loss-making, or non-performing assets held by enterprises or institutions through professional and systematic means to maximize asset value recovery and utilization efficiency. These services typically include asset inventory and valuation, value optimization plan design, asset restructuring and transfer, debt collection, non-performing asset disposal, and related legal, financial, and compliance support. Their core goal is to help enterprises optimize their asset structure and achieve financial stability while reducing asset holding costs, improving capital liquidity, and operational efficiency. The downstream clients of asset optimization and disposal services primarily include financial institutions (such as banks, trusts, and insurance companies), government and local state-owned assets management departments, large conglomerates, real estate developers, and various investment funds. These clients typically seek to improve capital utilization and return on assets through asset restructuring, debt resolution, idle asset revitalization, or non-performing asset exits. Services include asset valuation, value enhancement consulting, legal and financial advisory, mergers and acquisitions, debt restructuring, property rights transactions, and custody services. Due to the high technical and professional barriers in this industry, which involves multi-party coordination and high value-added consulting and execution services, its gross profit margin is generally around 55%. As a crucial link between the capital market and the real economy, asset optimization and disposal services are gradually shifting from traditional non-performing asset liquidation to a comprehensive value management and recycling model. With macroeconomic fluctuations, corporate transformation and upgrading, and tightening financial regulation, market demand for efficient asset turnover and structural optimization continues to grow. This sector not only boasts robust policy support and strong anti-cyclical properties, but is also rapidly evolving in areas such as digital assessment, intelligent

investment, and risk control. In the future, asset optimization and disposal services will demonstrate a trinity of development: "technology empowerment + professional integration + capital operation," becoming a crucial support force for reducing the burden on enterprises and increasing efficiency, ensuring the stable operation of financial institutions, and reallocating social resources.

The global Asset Optimization and Disposal Service market size was estimated at USD 3691.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.10% during the forecast period.
