Atomic Layer Deposition (ALD) coating machine is a device used to deposit atomic-level thin films layer by layer on the surface of materials. ALD coating machine is a chemical vapor deposition technology that gradually deposits thin films on the material surface through alternating gas injection and reaction steps. This layer-by-layer deposition process can control the thickness, composition and structure of the film, thus being widely used in microelectronics, optics, nanotechnology and other fields. ALD coating machines usually have high-precision control systems that can achieve precise control of the deposition process to meet the needs of different application fields.

The global Atomic Layer Deposition Coating Machine market size was estimated at USD 750.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.85% during the forecast period.
