Report Overview

Atropine Eye Drop is a pharmaceutical product designed for ophthalmic use, specifically formulated to treat various eye conditions. It contains atropine sulfate as the active ingredient, which is a naturally occurring alkaloid derived from the deadly nightshade plant. This ingredient acts as a muscarinic antagonist, blocking the action of acetylcholine at muscarinic receptors in the eye. The primary therapeutic use of atropine eye drops is to dilate the pupil, which can be beneficial in diagnosing and treating eye conditions such as uveitis, iritis, and certain types of glaucoma. Additionally, it can be used to prevent or treat symptoms of an adverse reaction to certain medications, such as organophosphate poisoning. The product is typically administered as a topical application to the affected eye, and its effects can last for several days, leading to a temporary paralysis of the ciliary muscle and a subsequent dilation of the pupil. It is crucial to follow the prescribed dosage and instructions provided by a healthcare professional to ensure safe and effective use.
