Abstracts

Augmented reality (AR) is a term used to identify a set of technologies that allow the view of the real world environment to be augmented or enhanced by computer-generated elements or objects. The visual perception of elements in the physical environment is enhanced through the use of computing devices. An emerging area of AR applications is the manufacturing industry, which is concerned with the process of transforming raw materials into finished goods with added value. Manufacturing companies need real-time information exchanges at various stages of the product lifecycle such as design, prototyping, production, assembly, maintenance/repair, etc.. This is due to rapid globalization and increase in the complexity of internal processes and supply chains. In this scenario, AR can be of great help because of its capability to simulate, assist, and improve the processes before they are carried out. The customers of manufacturing and industrial enterprises are open to utilizing augmented reality (AR) value-add services to reduce downtime and further streamline their operations.

The global Augmented Reality Ar In Manufacturing market size was estimated at USD 2871.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 32.15% during the forecast period.
