Abstracts

Austempered Ductile Iron (ADI) casting is a type of cast iron that undergoes a specialized heat treatment process called austempering, which enhances its mechanical properties. This process involves heating ductile iron to a high temperature, followed by rapid cooling and then holding it at an intermediate temperature to transform its microstructure into ausferrite. The resulting ADI has a unique combination of high strength, toughness, and wear resistance, making it ideal for demanding applications in industries such as automotive, construction, and agriculture. ADI castings are known for their superior performance, cost-effectiveness, and ability to replace more expensive materials like steel in many applications.

The global Austempered Ductile Iron Adi Casting market size was estimated at USD 1950.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
