Abstracts

Autoclaved Aerated Concrete (AAC) equipment refers to machinery and systems used in the production of AAC, a lightweight and high-insulating building material. The equipment typically includes a mixing and casting unit for preparing the AAC slurry, molds for shaping the material, autoclaves for the curing process, and cutting equipment for shaping the finished blocks or panels. AAC is made from sand, cement, lime, and aluminum powder, which undergoes a chemical reaction during autoclaving, resulting in a porous and lightweight structure. The equipment involved in AAC production ensures precise mixing, casting, curing, and cutting to produce durable, energy-efficient, and environmentally friendly building components used in residential, commercial, and industrial construction projects.

The global Autoclaved Aerated Concrete Equipment market size was estimated at USD 152.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
