## Abstracts

Automated Ambulatory Blood Pressure Monitoring (AABPM) is a medical technology that continuously measures blood pressure over an extended period, typically 24 hours, without requiring manual intervention. It utilizes an automatic inflation system and preset time intervals to record blood pressure data, providing a more comprehensive assessment of fluctuations compared to traditional methods. AABPM is widely used for diagnosing hypertension, evaluating treatment efficacy, and detecting conditions like nocturnal hypertension. Market Driver: The growth of the Automated Ambulatory Blood Pressure Monitoring (ABPM) market is primarily driven by the increasing prevalence of chronic diseases and the rising demand for effective hypertension management. With the aging global population, the incidence of hypertension, cardiovascular diseases, and other related chronic conditions continues to rise, fueling the demand for ABPM devices in both clinical and home settings. Additionally, advancements in wearable technology and remote monitoring solutions have improved patient compliance and data accuracy, further expanding market adoption. Government policies and expanded healthcare insurance coverage also play a crucial role in supporting the widespread use of automated ABPM devices. Market Challenge: Despite its promising growth, the ABPM market faces several challenges. The high cost of ABPM devices remains a significant barrier, particularly in developing regions and for low-income patients with limited access to healthcare resources. Additionally, patient discomfort and compliance issues pose obstacles to device adoption, as prolonged wear may cause inconvenience and affect continuous data collection. Furthermore, stringent regulatory requirements and technological barriers create entry challenges for new market players, limiting competition and slowing down the approval process for innovative ABPM solutions. Global main Ambulatory Blood Pressure Monitor players cover Baxter, SunTech Medical, A&D, Spacelabs Healthcare, Schiller, etc. In terms of revenue, the

global largest five manufacturers occupy a share nearly 68.19% in 2023.

The global Automated Ambulatory Blood Pressure Monitoring market size was estimated at USD 287.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
