Abstracts

There are various types of blood pressure meters, but an automatic blood pressure meter is designed to be even easier to operate than conventional products and allow anyone to take measurements. The most common type of sphygmomanometer is one in which a band-like object called a cuff is wrapped around the upper arm of the person being measured. This type cannot measure blood pressure correctly if the cuff is the wrong size or if it is placed in the wrong place. With the automatic blood pressure meter, you can take a measurement simply by putting your arm through the measuring section. There is no need to wrap the cuff around your arm by yourself, and the optimal pressure is applied simply by pressing a switch for easy measurement. The position and posture of the arm are important for correct blood pressure measurement. Some products are equipped with a function that determines the correct posture based on the angle of the measuring section through the arm and informs the person taking the measurement, making it easier to take correct blood pressure measurements.

The global Automatic Blood Pressure Meter market size was estimated at USD 6466.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
