Abstracts

An automatic fabric inspection machine is a specialized device used in textile manufacturing and processing to detect and classify defects in fabrics automatically. These machines utilize advanced imaging technology, such as cameras and sensors, to scan the entire surface of the fabric for imperfections such as holes, stains, discolorations, or weaving flaws. The inspection process is carried out rapidly and systematically, ensuring high accuracy and consistency in identifying defects that could affect the quality of the fabric. Once defects are detected, the machine can either mark them for later repair or automatically cut out the defective section, optimizing material usage and minimizing production waste.
