Report Overview

An Automatic Optical Comparator (AOC) is a precision measuring instrument used in manufacturing and quality control processes. It is designed to automatically inspect and compare the dimensions of manufactured parts against predefined specifications. The AOC employs optical technology, such as high-resolution cameras and lighting systems, to capture images of the parts and analyze their features. It then compares these images to a set of master templates or digital models, identifying any deviations from the desired dimensions. The system is capable of handling a wide range of parts, from small components to larger assemblies, and can be programmed to inspect multiple features simultaneously. AOCs are often used in industries such as automotive, aerospace, and electronics for their high-speed, high-accuracy inspection capabilities, which help to ensure product quality and consistency.
