Report Overview

The Automatic Oxygen Adjustment Oxygen Flow Therapy System is a medical device designed to dynamically regulate oxygen delivery to patients based on real-time physiological needs, such as oxygen saturation levels (SpO₂) or respiratory patterns. Unlike traditional oxygen therapy systems that provide a fixed flow rate, these advanced systems utilize sensors and algorithms to automatically adjust oxygen concentration, ensuring optimal therapy while minimizing waste and reducing the risk of oxygen toxicity. They are particularly beneficial for patients with chronic respiratory conditions, such as COPD or pulmonary fibrosis, as well as in acute care settings where precise oxygen titration is critical. The technology integrates with pulse oximeters or capnography devices to monitor patient vitals and adjust flow rates accordingly, improving both clinical outcomes and patient comfort. By automating oxygen delivery, these systems reduce the burden on healthcare providers and enhance treatment efficiency, making them a valuable advancement in respiratory care.
