Abstracts

An Automatic Plastic Recycling Washing Machine is a type of machine used in the plastic recycling industry to clean and wash plastic materials, such as PET bottles and other plastic containers. The machine typically includes a series of components, such as a conveyor belt, crusher, washing tank, screw feeder, and drying unit. The plastic materials are first fed into the machine's conveyor belt and transported to the crusher, where they are crushed into small pieces. The crushed plastic pieces are then transferred to the washing tank, where they are cleaned using hot water or chemicals to remove contaminants such as dirt, oil, and glue. The cleaned plastic pieces are then fed to the screw feeder, which removes any remaining water and transports them to the drying unit. Finally, the dried plastic pieces are collected for further processing and reuse. An Automatic Plastic Recycling Washing Machine can increase the efficiency and effectiveness of plastic recycling operations while reducing the environmental impact of plastic waste.

The global Automatic Plastic Recycling Washing Machine market size was estimated at USD 125.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
