Abstracts

Automatic Regenerative Thermal Oxidizer (RTO) is a type of industrial air pollution control equipment that is used to treat exhaust air emissions from industrial processes. It works by oxidizing the pollutants in the exhaust air stream at high temperatures, typically between 815°C to 980°C (1500°F to 1800°F), converting them into carbon dioxide and water vapor. The RTO is called 'regenerative' because it uses a heat exchanger to recover and reuse the heat generated during the oxidation process, making it a more energy-efficient solution.

The global Automatic Regenerative Thermal Oxidizer market size was estimated at USD 580.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
