Report Overview

An automatic rotary parking garage is a type of mechanical parking system designed to maximize parking capacity in urban environments with limited space. In this system, vehicles are parked on multiple levels within a cylindrical or tower-like structure, with each parking space arranged in a circular configuration around a central core. The parking platforms are mounted on a rotating mechanism that moves horizontally and vertically to lift and lower vehicles to the desired parking level. As vehicles are parked in a stacked manner, the system minimizes the footprint of the parking facility and maximizes the use of available land. Automatic rotary parking garages are typically fully automated, with users able to access their vehicles using a touchscreen interface or mobile app. These systems offer several advantages, including efficient use of space, rapid parking and retrieval times, and enhanced security for parked vehicles. They are commonly used in densely populated urban areas where land is limited and parking demand is high, providing a convenient and space-efficient solution to parking challenges.
