Report Overview

An Automatic Steering Gear, also known as a power steering gear or power steering box, is a mechanical component integral to the power steering system of a vehicle. It is designed to amplify the driver's steering effort by utilizing hydraulic or electric power, thereby reducing the physical effort required to steer the vehicle. The gear translates the input from the steering wheel into a more powerful output that assists in turning the wheels. It typically consists of a housing, a piston, and a sector gear, which work together to convert the rotational motion from the steering wheel into linear motion that can be used to steer the vehicle. The gear may be of various types, including worm and sector, recirculating ball, or rack and pinion, each with its own advantages and applications. The automatic steering gear plays a crucial role in enhancing driving comfort, safety, and vehicle control, especially at high speeds or during low-speed maneuvers.
