Report Overview

An automobile brake test bench, also known as a brake tester or brake dynamometer, is a specialized equipment used to measure the braking performance of vehicles. It is designed to simulate various driving conditions and evaluate the effectiveness and efficiency of a vehicle's braking system. Typically, a vehicle is driven onto the brake test bench, and the brakes are applied under controlled conditions, such as specific speed, load, or braking force. The bench measures and records various parameters, including braking force, stopping distance, deceleration, and brake balance between front and rear wheels. The test results provide valuable information about the braking system's functionality, performance, and safety. These tests are essential for quality control during vehicle manufacturing, research and development of braking systems, and periodic inspections to ensure compliance with safety regulations.
