Abstracts

Automotive carbon fiber parts are vehicle components whose main load-bearing or visible structures are made from carbon-fiber-reinforced plastics (CFRP), rather than traditional metals or standard plastics. Typical parts include exterior body panels such as hoods, roofs, fenders, spoilers and doors, as well as structural elements like roof bows, pillars, cross-members, crash beams and battery enclosures, plus interior trim, seat shells and aerodynamic add-ons. These parts exploit CFRP's combination of very low density, high stiffness and strength, fatigue and corrosion resistance, and good energy-absorption behavior in crashes. Upstream, automotive carbon fiber parts rely on carbon fibers, polymer matrices, plus sizings, core materials and process auxiliaries. Downstream, automotive carbon fiber parts are primarily used in body-in-white structures, closures, exterior panels, wheels, suspension arms, leaf springs, seat shells, cross-members, battery enclosures and hydrogen storage tanks, targeting mainly premium and performance ICE vehicles, battery electric vehicles (BEVs) and motorsport programs. In 2024, the average market price of global automotive carbon fiber parts was approximately US\$158/kg, with a gross profit margin of approximately 25%-35%.

The global Automotive Carbon Fiber Parts market size was estimated at USD 672.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
