Report Overview

Automobile crankcase positive ventilation pipe assembly is a key component in the crankcase positive ventilation system (Positive Crankcase Ventilation, PCV), which is responsible for transporting the exhaust gas and oil mist accumulated in the crankcase to the intake system through the pipe to reduce pollutant emissions and maintain the balance of internal engine pressure. This system reduces the direct emission of harmful gases by redirecting the exhaust gas into the combustion chamber for secondary combustion, while protecting the internal parts of the engine from pollution.
