Abstracts

An automotive electrical parking brake, also known as an electronic parking brake (EPB), is a modern automotive braking system that replaces the traditional handbrake or foot-operated parking brake with an electronically controlled mechanism. It is designed to assist the driver in parking and holding the vehicle stationary, especially on inclines or declines. Instead of using mechanical cables or rods to engage the parking brake, the EPB relies on electrical motors or actuators to apply and release the brake.

The global Automotive Electrical Parking Brake market size was estimated at USD 2148.27 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 11.70% during the forecast period.
