Report Overview

Automotive tinted canopy refers to a type of window glass or roof glass that can adjust transparency or color. This technology allows drivers and passengers to adjust the properties of the glass as needed, such as its transmittance, reflectivity or color, thereby changing the light, temperature and privacy inside the vehicle. The application of this technology can make passengers more comfortable. For example, on hot summer days, the glass can be dimmed to reduce sunlight entering the car and lower the temperature inside the car. The glass can also be dimmed when privacy needs to be protected or security improved.
