Abstracts

Inverters are a critical part of the electric vehicle (EV) drivetrain. Put simply, their role is to convert a direct current (DC) supplied by the onboard battery in three separate phases; into an alternating current (AC) for the vehicle's traction motor, back into DC to enable regenerative braking and, finally, to control motor speed when the accelerator is depressed. Without these inverters, EVs would not be able to function at all.

The global Automotive Silicon Carbide Sic Inverters market size was estimated at USD 852.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 31.50% during the forecast period.
