Abstracts

In automotive-grade optocouplers, the most common type of output is the transistor output optocoupler. Transistor output optocouplers typically consist of a light-emitting diode (LED) as the input and a photosensitive transistor (usually a phototransistor) as the output. This type of optocoupler is widespread in automotive applications for the following reasons:1. Isolation Performance: Transistor output optocouplers provide good electrical isolation, protecting sensitive electronic equipment from high voltages and currents.2. Signal Transmission: They effectively convert input signals into output signals, suitable for various logic and analog signal transmissions.3. Compatibility: Transistor output optocouplers are compatible with TTL (Transistor-Transistor Logic) and CMOS (Complementary Metal-Oxide-Semiconductor) logic circuits, making them easy to integrate into automotive electronic systems.4. Reliability: Automotive-grade transistor output optocouplers are rigorously tested to ensure stable operation in the harsh environments of automotive electronic systems, such as temperature variations, vibration, shock, and electromagnetic interference.5. Broad Application: Transistor output optocouplers are widely used in automotive applications, including Engine Control Units (ECUs), body control modules, power management systems, airbag systems, Anti-Lock Braking Systems (ABS), and more.Although SCR output optocouplers and other types of optocouplers (such as photovoltaic output, MOSFET output, etc.) are useful in specific applications, transistor output optocouplers dominate a significant market share in automotive-grade optocouplers due to their versatility and reliability.

The global Automotive Transistor Output Optocouplers market size was estimated at USD 120.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
