Abstracts

Autonomous underwater vehicle sonar system is a set of sonar-based instruments and sensors mounted on an underwater drone or robot. The AUV is equipped with specialized sonar technology that can emit and receive sound waves underwater to gather data about the surrounding environment. The sonar system can be used for various applications, such as mapping the seafloor, detecting underwater objects or structures, and conducting marine research or exploration. The AUV's sonar system can provide detailed images, topographic maps, and data sets, helping to understand underwater terrain or features, locate underwater resources, and collect scientific data. The autonomous nature of the AUV allows it to operate independently, without the need for direct human control, making it capable of conducting surveys or missions in remote or dangerous underwater locations.

The global Autonomous Underwater Vehicle Sonar market size was estimated at USD 320.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
