Report Overview

An Aviation Oxygen Mask is a specialized piece of equipment designed to provide breathable oxygen to pilots, crew members, and passengers in an aircraft during situations where the ambient air is insufficient or contaminated. It is typically a part of the aircraft's emergency oxygen system and is used in instances of rapid decompression, smoke in the cabin, or other emergencies that compromise the quality of breathable air. The mask is designed to be comfortable, secure, and easy to put on quickly in a high-stress situation. It usually features a clear visor to allow for clear vision and may include a communication system for in-flight communication. The oxygen supply can come from either a portable oxygen cylinder or an on-board oxygen generation system, ensuring a continuous flow of oxygen until the aircraft reaches a safe altitude or the emergency is resolved.
