Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Barium Sulfate for Coatings competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Barium sulfate for coatings is a white inorganic filler used as an extender pigment in coatings to improve thickness, abrasion resistance, water resistance, heat resistance, surface hardness, and impact resistance. Upstream supply mainly involves raw material sourcing, including barium ore (barite) and chemical raw materials such as sodium sulfate. Barium sulfate is an important extender pigment in coatings, used in various types of coatings, including water-based coatings, oil-based coatings, and topcoats. Global sales volume in 2024 is estimated at 800,000 tons, with an average market price of approximately US\$350 per ton. The industry's gross profit margin is in the range of 15%-30%. Barium sulfate is a widely used coating material, significantly impacting coating thickness, abrasion resistance, water resistance, heat resistance, surface hardness, and impact resistance. China possesses abundant barite mineral resources, giving it a unique resource advantage in producing precipitated barium sulfate, along with a large downstream customer base. However, currently, the product is primarily used in low- to mid-range paints and coatings, with little difference in quality among manufacturers. The robust growth of the global coatings market, particularly in powder coatings, industrial corrosion protection, and automotive coatings, has driven the continued increase in the volume of precipitated barium sulfate in high-end coatings. However, the industry also faces several constraints, with some manufacturers citing high energy consumption and high process costs as major limiting factors.

The global Barium Sulfate for Coatings market size was estimated at USD 279.0 million

in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
