Abstracts

Barrel-Type Centrifugal Compressor is one of the types of centrifugal compressors. Centrifugal compressor is also called 'vortex Ye compressor', a compressor. The structure and operation principle is similar to that of centrifugal blower, but it is always multistage, which can make the gas obtain higher pressure, larger processing capacity and higher efficiency. Turbine compressors with exhaust pressure higher than 0.015 mpa and gas flow mainly along the radial direction are also known as runoff compressors. Exhaust pressure less than 0.2 mpa, also known as centrifugal blower. Centrifugal compressors are widely used in various process processes to transport air, various process gases or mixed gases, and increase their pressure.

The global Barrel Type Centrifugal Compressor market size was estimated at USD 2850.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
