### Report Overview

Battery-as-a-Service (BaaS) is a business model where customers lease or subscribe to battery packs instead of purchasing them outright, enabling cost savings, flexibility, and access to upgraded technology without the burden of ownership. This model is particularly prevalent in electric vehicles (EVs), energy storage systems, and consumer electronics, where high battery costs and rapid technological advancements make ownership less attractive. BaaS providers typically offer maintenance, replacement, and recycling services, reducing downtime and environmental impact. The model also supports grid stabilization through vehicle-to-grid (V2G) integration, where EV batteries can supply power back to the grid during peak demand. By decoupling battery costs from upfront vehicle or device prices, BaaS lowers entry barriers, accelerates adoption of clean energy solutions, and fosters circular economy principles by optimizing battery lifespan and recycling efficiency. The rise of BaaS aligns with broader trends in servitization, sustainability, and shared mobility, making it a disruptive force in energy and transportation markets.
