Report Overview

The Battery Extrusion Needle Tester is a specialized testing device designed to evaluate the safety and durability of lithium-ion batteries by simulating mechanical abuse conditions, such as extrusion or penetration, which could occur during manufacturing, transportation, or usage. This equipment applies controlled force to a battery cell to assess its structural integrity and thermal stability under stress, helping manufacturers identify potential failure points, such as short circuits or thermal runaway. The tester is critical for compliance with international safety standards (e.g., UL, IEC, UN 38.3) and is widely used in battery production lines, quality control labs, and R&D facilities. With the rapid growth of the electric vehicle (EV) and energy storage markets, demand for reliable battery safety testing equipment has surged, positioning extrusion needle testers as essential tools for ensuring battery reliability and regulatory compliance. The market is driven by advancements in battery technology, stricter safety regulations, and increasing investments in EV and renewable energy infrastructure.
