Report Overview

Beeswax candles are a type of candle made from beeswax, a natural substance produced by honey bees. These candles are known for their eco-friendly properties, as beeswax is a renewable resource and the production process does not involve the use of harmful chemicals. Beeswax candles are often appreciated for their long burn time, low soot production, and natural honey-like aroma. They are also believed to emit negative ions when burned, which can help purify the air and reduce allergens. Additionally, beeswax candles are typically more expensive than their paraffin counterparts due to the higher cost of raw materials and the labor-intensive production process.
