Report Overview

Bifacial High-efficiency Monocrystalline PERC Cells are an advanced solar cell technology that not only employs single-crystal silicon wafers and PERC technology on the front but also applies a similar treatment to the back. This double-side passivated and locally back-passivated (DSPERC) structure design is intended to capture more sunlight and enhance the photoelectric conversion efficiency of the cell. Since the back can also absorb light, these cells can make full use of sunlight, improving power generation efficiency even in weak lighting conditions.
