## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Binder Jetting Equipment competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Binder jetting is a 3D printing process that uses a liquid binding agent (think: glue) deposited onto a build platform to bond layers of powder material and form a part. Binder jetting can be used to print a variety of materials including metals, sands and ceramics. Markets for this process include industrial applications, dental and medical devices, aerospace components, part casting, luxury applications, and more. Binder Jetting (BJ) technology is one of the 3D printing processes. Its principle is to selectively bond the powder materials on the powder bed together by depositing liquid binder from the print head, thereby constructing a 3D printing technology for parts. After years of development and practice, this process has been proven to be applicable to most powder materials and has relatively low equipment costs. Therefore, with its high efficiency and low cost advantages, BJ technology has gradually attracted attention in recent years and has become the most promising 3D printing technology after the four rapid prototyping processes of SLA, LOM, SLS and FDM]. However, compared with other high-energy beam 3D printing technologies, people's understanding of BJ technology is still inadequate, especially in the field of metal BJ technology. There are still many problems that need to be overcome. As a promising 3D printing technology, binder jetting technology can selectively spray binder onto powder to form a bond between particles, realize product personalization, rapid prototyping, and even mass production of terminal parts.

The global Binder Jetting Equipment market size was estimated at USD 145.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70%

during the forecast period.
