Report Overview

Bio-based thermoplastic elastomers (TPEs) are a class of versatile and sustainable materials derived from renewable resources such as plant-based oils, starches, or sugars. These materials exhibit both the elastic properties of rubbers and the processability of plastics, making them suitable for a wide range of applications, including automotive parts, medical devices, and consumer goods. Bio-based TPEs are environmentally friendly alternatives to traditional petroleum-based elastomers, offering reduced carbon footprints and biodegradability. They can be processed using conventional plastic manufacturing techniques such as injection molding and extrusion, ensuring compatibility with existing production infrastructure while promoting sustainability and reducing dependence on fossil fuels.
