Abstracts

Biodegradability and compostability testing refer to a series of assessments conducted on materials or products to determine their ability to break down naturally in the environment and their suitability for composting processes. These tests evaluate the biodegradability and compostability of materials based on specific standards and guidelines. Biodegradability testing assesses the rate and extent of microbial decomposition and breakdown of the material under controlled conditions.

Compostability testing, on the other hand, examines the ability of materials to undergo a managed composting process, creating nutrient-rich compost without leaving behind harmful residues. These tests help determine the environmental impact and potential applications of materials, guiding product development and promoting sustainable waste management practices.

The global Biodegradability And Compostability Testing market size was estimated at USD 185.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
