Report Overview

A biodegradability testing system is a comprehensive setup used to evaluate the ability of materials to break down and decompose naturally through biological processes. These systems simulate environmental conditions such as soil, water, and compost to assess how quickly and completely a material degrades when exposed to microorganisms, moisture, and other natural factors. They measure parameters like carbon dioxide production, oxygen consumption, and the reduction of material mass over time. Biodegradability testing systems are crucial for determining the environmental impact of products, ensuring compliance with regulatory standards, and promoting the development of sustainable materials. They are widely used in industries such as packaging, plastics, and textiles to verify the eco-friendliness of products and materials.
