### Report Overview

Biodegradable elastomers are a class of polymers that combine the elastic properties of traditional elastomers with the ability to break down into non-toxic byproducts over time through biological processes. These materials are designed to degrade in natural environments, reducing long-term pollution and environmental impact. Commonly used in medical, agricultural, and packaging applications, biodegradable elastomers offer an eco-friendly alternative to conventional non-degradable polymers. They are typically synthesized from renewable resources and can be engineered to degrade at controlled rates, ensuring functionality during use and safe decomposition afterward. Advances in this field aim to balance mechanical performance with biodegradability, contributing to sustainable material science.
