Report Overview

Biodegradable Non-Woven Fabric is an environmentally friendly material that is derived from natural or synthetic polymers. This fabric is characterized by its non-woven structure, which means it is directly formed from short fibers or filaments without the need for weaving or knitting processes. The biodegradability of the fabric refers to its ability to break down naturally over time when exposed to environmental conditions such as microorganisms, sunlight, and moisture. This eco-friendly property makes it an attractive alternative to traditional non-woven fabrics, particularly for applications where disposal and environmental impact are concerns. Biodegradable Non-Woven Fabric is often used in agriculture, horticulture, packaging, and medical applications due to its strength, flexibility, and the fact that it can be engineered to degrade at a specific rate, reducing waste and promoting sustainability.
