Report Overview

Biodegradable PET Film is a type of environmentally friendly plastic material that is derived from polyethylene terephthalate (PET), a widely used polymer known for its strength, clarity, and recyclability. This innovative product is designed to decompose naturally over time when exposed to specific environmental conditions, such as microorganisms, heat, and humidity, thus reducing its environmental impact compared to traditional non-biodegradable plastics. Biodegradable PET Film maintains many of the desirable properties of conventional PET, such as its barrier properties, mechanical strength, and transparency, while also offering the advantage of reduced persistence in the environment. It is particularly useful in applications where a balance between performance and sustainability is required, such as in packaging, agriculture, and other industries seeking to minimize their ecological footprint.
