### Report Overview

A Biodegradable PFO Occluder is a medical device designed to close a patent foramen ovale (PFO), a small opening in the heart that typically closes shortly after birth. This occluder is made from biodegradable materials, which means it is absorbed by the body over time, leaving no permanent implant behind. The primary function of the Biodegradable PFO Occluder is to prevent potential complications such as strokes or other systemic embolisms that may arise due to blood clots passing through the PFO from the right atrium to the left atrium. The device is implanted during a minimally invasive procedure, typically using a catheter, and it promotes the growth of the patient's own heart tissue to seal the hole permanently. This innovative approach offers a less invasive alternative to traditional metal implants, reducing the risk of long-term complications associated with permanent implants, and aligning with the growing trend towards temporary or resorbable medical devices in cardiovascular interventions.

In 2024, the global Biodegradable PFO Occluder market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
