Report Overview

A biodegradable soil cover film is an environmentally friendly agricultural product designed to protect and manage soil conditions. It is made from natural, biodegradable materials such as plant-based polymers or other eco-friendly substances that break down over time without leaving harmful residues. This type of film is used to cover the soil surface, retaining moisture, suppressing weed growth, and maintaining soil temperature, thus promoting plant growth and reducing the need for synthetic fertilizers and pesticides. The primary advantage of biodegradable soil cover films is their minimal environmental impact, as they decompose naturally into the soil, enriching it with nutrients and avoiding long-term pollution associated with non-biodegradable plastics. This product is particularly relevant for sustainable agriculture and horticulture, where the focus is on reducing the carbon footprint and promoting ecological balance.
