Report Overview

Biogas storage equipment is an important part of biogas engineering, mainly used to store biogas generated during the production process so that it can be used when needed. Biogas is a combustible gas, mainly composed of methane and carbon dioxide, produced from organic waste through anaerobic fermentation and other processes. The main function of biogas storage equipment is to collect and store the biogas produced during the production process to ensure the continuous supply and effective use of biogas. Since there is often a time difference between the production and use of biogas, storage equipment can also play a role in regulating the balance between biogas supply and demand and ensure the stability of biogas supply.
