Report Overview

Biogas storage equipment is an important part of biogas projects. It is mainly used to store biogas generated during the production process so that it can be used when needed. Biogas is a combustible gas, the main components of which are methane and carbon dioxide. It is produced from organic waste through processes such as anaerobic fermentation. The main function of biogas storage equipment is to collect and store biogas generated during the production process to ensure the continuous supply and effective use of biogas. Since there is often a time difference between the production and use of biogas, storage equipment can also play a role in regulating the balance between biogas supply and demand and ensure the stability of biogas supply.
