### Report Overview

Biogas is the mixture of gases produced by the breakdown of organic matter in the absence of oxygen, usually consisting of certain quantities of methane and other constituents. Biogas can be produced from raw materials such as agricultural waste, manure, municipal waste, plant material, sewage, green waste or food waste. Biogas is a renewable energy source. In India, it is also known as "Gobar Gas". Biogas systems are fully integrated farm solutions designed to reach millions of rural households in developing countries. These systems enable rural households with livestock to use the manure from their livestock to generate clean fuel for cooking and organic fertilizer. A biogas system relies on the natural interaction between microorganisms and organic wastes ? such as manure, sewage, agricultural by-products, and discarded food ? to produce a clean and energy-efficient burnable gas. The gas is distributed through a network of pipes and is used for cooking and heating.
