Report Overview

The biosimilar drug market refers to pharmaceuticals that are highly similar to already approved biologic drugs (reference products) in terms of safety, efficacy, and quality, with no clinically meaningful differences. Biosimilars are developed after the patent expiration of originator biologics, offering cost-effective alternatives while undergoing rigorous regulatory scrutiny to ensure comparability. Unlike generic drugs, biosimilars are not identical to their reference products due to the complexity of biologic manufacturing, which involves living organisms. The market is driven by increasing demand for affordable biologic treatments, rising prevalence of chronic diseases, and patent expirations of major biologics. However, challenges such as regulatory complexities, high development costs, and physician/patient acceptance may impact growth. The sector is expanding rapidly, particularly in oncology, autoimmune diseases, and diabetes, with strong competition from both established pharmaceutical companies and emerging biosimilar developers.

This report provides a deep insight into the global Biosimilar Drug market covering all its essential aspects.
