Report Overview

Bismuth telluride selenide ($\text{Bi}_x\text{Te}_{1-x}\text{Se}_x$) powder is a thermoelectric material primarily composed of bismuth, tellurium, and selenium, known for its high thermoelectric efficiency at near-room-temperature applications. It is widely used in thermoelectric cooling devices (Peltier coolers) and power generation systems due to its ability to convert thermal energy into electrical energy and vice versa with minimal energy loss. The material's performance is highly dependent on its stoichiometric composition, particle size, and purity, which influence its Seebeck coefficient, electrical conductivity, and thermal conductivity. Its applications span industries such as electronics (for precise temperature control in semiconductors and optoelectronics), automotive (waste heat recovery systems), and medical devices (portable cooling solutions). The growing demand for energy-efficient and sustainable technologies, coupled with advancements in material science, has positioned bismuth telluride selenide powder as a critical component in next-generation thermoelectric solutions.
