Report Overview

Bleached Chemical Mechanical Pulp (BCTMP) is a type of high-quality papermaking pulp derived from wood fibers. It is produced through a process that combines chemical treatment and mechanical refining to separate the fibers from the wood. The chemical treatment involves the use of chemicals such as sodium hydroxide and sodium sulfide to break down the lignin, which binds the cellulose fibers together in the wood. Following this, mechanical refining is employed to further separate the fibers. The resulting pulp is then bleached to achieve a high brightness level, making it suitable for various high-quality paper products such as printing and writing paper. BCTMP is valued for its strength, brightness, and ability to be used in a wide range of paper grades, offering a balance between cost efficiency and product quality.
