## Abstracts

Blockchain technology provides a robust platform for implementing decentralized identity (DID) systems, which significantly enhance security and user control compared to traditional centralized identity management methods. Decentralized Identity (DID) refers to a digital identity that is controlled by the identity holder, rather than a central authority. It uses blockchain to create a secure, immutable, and transparent system where the identity information is stored and managed. Blockchain serves as the foundational technology for decentralized identities. It allows for the creation of a distributed ledger that no single entity owns or controls. This ledger records all identity transactions (creation, modification, verification) in a secure and tamper-proof manner.

The global Blockchain Decentralized Identity market size was estimated at USD 49.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 32.10% during the forecast period.
