Report Overview

A Blood Pressure Machine, also known as a sphygmomanometer, is a medical device designed to measure a person's blood pressure by determining the force exerted by circulating blood upon the walls of blood vessels. It typically consists of an inflatable cuff, a pressure gauge, and a stethoscope. The cuff is wrapped around the upper arm, and when inflated, it temporarily restricts blood flow. As the cuff is deflated, the pressure gauge measures the blood pressure, while the stethoscope is used to listen for the Korotkoff sounds, which indicate the systolic and diastolic pressures. Blood pressure machines are essential tools in healthcare settings and at home for monitoring and managing hypertension and cardiovascular health. They come in various types, including manual, semi-automatic, and fully automatic models, each with its own set of features and ease of use.
