Report Overview

Blue Light Blocking Glasses are a type of eyewear specifically designed to filter out high-energy blue light emitted by digital screens, such as smartphones, computers, and tablets. These glasses feature specialized lenses that absorb or reflect blue light wavelengths, which are known to cause digital eye strain and disrupt sleep patterns due to their impact on the circadian rhythm. The primary purpose of these glasses is to reduce eye fatigue, improve sleep quality, and potentially lower the risk of long-term retinal damage associated with prolonged exposure to blue light. They are typically made from materials that are lightweight, comfortable, and durable, and may also offer additional benefits such as UV protection and scratch resistance. Blue Light Blocking Glasses are marketed towards individuals who spend extended periods in front of digital devices, particularly in low-light conditions or during evening hours.
