### Report Overview

Blue Light Blocking Lenses are specialized eyewear designed to protect the eyes from the harmful effects of high-energy visible (HEV) light, commonly known as blue light. This type of light, with wavelengths between 380 and 500 nanometers, is emitted by digital screens such as computers, smartphones, and tablets. These lenses are typically equipped with a coating or embedded technology that selectively filters out or reduces the amount of blue light reaching the eyes. The primary purpose of these lenses is to minimize digital eye strain, reduce the risk of macular degeneration, and improve sleep quality by reducing the disruptive effects of blue light on the body's circadian rhythm. They are particularly beneficial for individuals who spend extended periods in front of digital devices, as they can help alleviate symptoms such as dry eyes, headaches, and difficulty sleeping.
